Ventilation
Performance

**Certifying Home Ventilation
Performance**

Since 1955 HVI has been providing the residential ventilation industry with accurate performance ratings for powered and static ventilation devices.

**Advancing Residential
Ventilation Technology**

New products, new members, new procedures, and continuing research all contribute to HVI's ongoing role in improving home comfort and indoor air quality.

**Members Supply More Than
90% of Residential
Ventilation in North America**

HVI members are leaders in their industry, providing performance information on which you can depend – a complete membership list can be found at www.hvi.org

TRUSTED PERFORMANCE
OVER 50 YEARS

Rigorously Tested.

Proven Performance.

Certified & Verified.

Independent

The Home Ventilating Institute™ (HVI) rigorously tests residential ventilation products for airflow, sound, and energy performance utilizing world class, independent testing laboratories.

Experience

The performance testing procedures have been developed with the benefit of the many years of experience gained since HVI was founded as a non-profit industry organization in 1955.

Accurate

Using these procedures, every type of home ventilating product can be HVI Certified for accurate performance, including bathroom fans, kitchen range hoods, in-line fans, heat and energy recovery ventilators, static devices such as fresh air inlets, ridge vents, and louvers – and more.

Certified Confidence

Many years of testing experience make 'HVI Certified' the label that contractors and builders depend on to ensure customer satisfaction.

Certified Airflow

Airflow is measured based on installed conditions. Sound, presented in Sones, is recorded at a specified airflow, while the energy consumed is recorded in watts.

Certified Sound

Today, building codes often specify airflow, sound, and energy performance for ventilation systems. Only HVI can provide the certified data necessary to ensure code compliance.

Certified Energy Use

Whether you are a contractor, builder, or homeowner, the proven performance provided by HVI certification is essential when selecting home ventilation.

Reviewed

Once a product is independently tested, the manufacturer must submit the test report to HVI. Upon successful review, HVI Certification will be provided. The product is then listed in the online Certified Product Directory.

Retested

To ensure that product performance continues to meet the original results, products are purchased from distributors on an annual schedule, tested, and the results compared to the original certification test.

Reinforced

Should a product fail verification, the manufacturer must withdraw the product, accept the new ratings, or make changes to the product and test it again.

Respected

This ongoing verification means that you can trust the performance of HVI Certified products, today and tomorrow.

Since
1955

Performance testing of residential ventilation since 1955.

The 'HVI Certified' label appears only on certified products. Always look for the sign of proven ventilation performance.
